

Subject: Computing	Year group: 4 Term: Summer 2	Title: Programming
<p>What should I know?</p> <ul style="list-style-type: none">• How to plan and write simple programs• The difference between an input and an output devices and how they can be used• That computers can collect data from various inputs• That evaluation is a vital part of the design process• How to control physical devices.• That logical reasoning means detect and correct errors in programs• What the terms sequence and repetition mean and know how to use them in programs 	<p>Facts I will learn ...</p> <ul style="list-style-type: none">• How to plan and write programs that accomplish specific goals• That computers can collect data from various inputs• What debugging is and how it can be used to achieve specific goals• That planning/evaluation is a vital part of designing programs• How to use logical reasoning to detect/correct errors in programs• To begin to understand selection in computer programming• How IF statements work• How to use co-ordinates in computer programming• How to use the "repeat until" command• Understand how the IF/ELSE statements work• Understand what a variable is in programming• To use a number variable• To create a playable game	<p>Key questions ...</p> <ul style="list-style-type: none">• What is the goal I want to accomplish?• What are the different inputs that I can use to transfer data onto a computer?• How can logical reasoning help me to detect and correct errors in programs?• Why is it important to plan and evaluate the effectiveness of a program?• How can I use debugging to achieve a specific goal?• Can you explain the stages of the design, code, test, debug coding process?• What does selection mean in coding and how can this be achieved?• How can variables and if/else statements be useful when coding programs with selection? 

Key Skills...	Experiences that school may provide:	Key vocab	Definition									
<ul style="list-style-type: none">To write programs that accomplish specific goalsTo read what a sequence in a program doesTo design programs, showing skills needed to plan and implement a task/problem that accomplish specific goalsTo create programs that implement algorithms to achieve specific goalsTo debug programs that accomplish specific goals through self and peer assessmentTo use sequence, repetition and selection in programsTo use sequences of commands to control physical devices using outputsTo use and debug programs that control physical devicesTo use logical reasoning to detect and correct errors in programs 	<ul style="list-style-type: none">The opportunity to take part in both practical and computer based programming activities 	<table><tr><td>Repetition</td><td>When part of a program repeats itself. For example, in animation you may repeat the movements of a character to make it look like it's moving along.</td></tr><tr><td>Debug</td><td>Debugging is checking the code in a computer program to ensure it works, and changing it if it doesn't.</td></tr><tr><td>Selection</td><td>Selection is a decision command. When selection is used, a program will choose which bit of code to run depending on a condition</td></tr><tr><td>Command</td><td>To order or instruct</td></tr><tr><td>If/Else Statement</td><td>A conditional command. This tests a statement. If the condition is true, the commands inside the 'if' box will run. If the</td></tr></table>	Repetition	When part of a program repeats itself. For example, in animation you may repeat the movements of a character to make it look like it's moving along.	Debug	Debugging is checking the code in a computer program to ensure it works, and changing it if it doesn't.	Selection	Selection is a decision command. When selection is used, a program will choose which bit of code to run depending on a condition	Command	To order or instruct	If/Else Statement	A conditional command. This tests a statement. If the condition is true, the commands inside the 'if' box will run. If the
Repetition	When part of a program repeats itself. For example, in animation you may repeat the movements of a character to make it look like it's moving along.											
Debug	Debugging is checking the code in a computer program to ensure it works, and changing it if it doesn't.											
Selection	Selection is a decision command. When selection is used, a program will choose which bit of code to run depending on a condition											
Command	To order or instruct											
If/Else Statement	A conditional command. This tests a statement. If the condition is true, the commands inside the 'if' box will run. If the
